## THIS IS WHAT MAKES Doloctan® forte SPECIAL

- ✓ Specially coordinated bioactive body-identical nerve building blocks with patented folate
- ✓ Effectiveness scientifically confirmed
- ✓ Only 1 capsule per day
- ✓ Without artificial colors and flavors
- ✓ Without preservatives (according to the law)
- ✓ Without magnesium stearate
- ✓ Fair price and high quality
- ✓ Also suitable for vegans

Doloctan® forte

EFFECTIVE TRIO

» with the powerful combination:

Uridine monophosphate  
Patented folate  
Bioaktives Vitamin B<sub>12</sub>

Doloctan® forte

# When your nerves annoy you

Exclusively in your  
**PHARMACY**

## FOR THE SUPPORT OF A HEALTHY NERVOUS SYSTEM<sup>1</sup> AND CELL DIVISION<sup>2</sup>

only   
**1x** daily

Food supplement with uridine monophosphate (UMP), active folate (Quatrefolic®) and vitamin B12 in the form of methylcobalamin. For the support of a healthy nervous system and cell division. <sup>1</sup>Vitamin B12 contributes to the normal function of the nervous system. <sup>2</sup>Vitamin B12 and folate have a function in cell division.

# Doloctan® forte – YOUR DAILY SUPPORT

In an active everyday life, it can be challenging to provide the body with all the nutrients it needs. **Doloctan® forte** was developed to support you in exactly this area - it serves as a daily supplement to a balanced diet. The preparation combines uridine monophosphate with the essential vitamins B12 and folic acid to promote your well-being. Without unnecessary additives and completely vegan, **Doloctan® forte** meets the highest quality standards.

## EFFECTIVE COMBINATION: NEUROTROPIC POWER NUTRIENTS

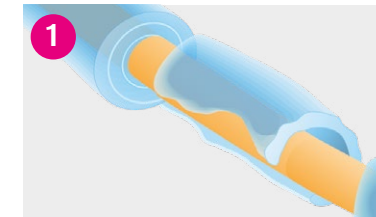

**Doloctan® forte** contains a combination of uridine monophosphate (UMP), folate (folic acid) and vitamin B12. Uridine monophosphate is an essential building block in the complex machinery of our body, particularly known for its role in the nucleic acids that form the basis of our cells. It supports the body naturally as it is a building block that is also found in food. Vitamin B12, an essential vitamin that plays a role in many metabolic processes, is known to support psychological functions and the nervous system in normal functioning. It is also known for its involvement in the formation of red blood cells and thus contributes to a healthy energy metabolism.

Folic acid, another B vitamin, not only helps to reduce fatigue, but also supports normal amino acid synthesis and has a function in cell division. As a component of **Doloctan® forte**, folic acid is provided in a bioactive form that can be easily utilized by the body. This is particularly important as folic acid is not stored by the body and must therefore be taken in regularly with food.

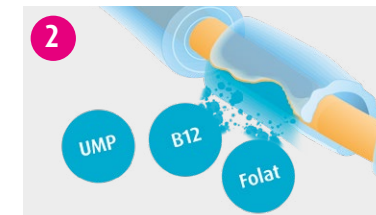

The two B vitamins folate and B12 work very closely together in the body and play an essential role in nerve metabolism. B12, for example, contributes to the formation of the myelin layer, which protects the nerve cells, while folate is involved in the synthesis of amino acids. These in turn are essential for the production of neurotransmitters, the chemical messengers responsible for the transmission of signals in the nervous system, and together these components form a trio of nutrients aimed at supporting the body in its healthy function. **Doloctan® forte** is designed to provide you with these important micronutrients in a high-quality and bioactive form.

## EFFECTIVE TRIO: NEUROTROPIC POWER NUTRIENTS

*Damaged nerve cell,  
Myelin loss due to  
z. e.g. stress, metabolic  
disorders, etc.*

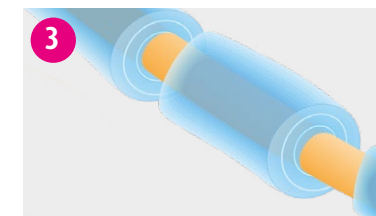

Central building blocks for the body's own nerve repair workshop are uridine monophosphate (UMP), folic acid and vitamin B12.

*Body's own repair process  
and myelin build-up*

As an essential building block of nucleic acids, UMP is responsible for the production of new RNA in the organism, even in the case of nerve damage. It also promotes protein biosynthesis and accelerates the reconstruction of neuronal membranes.

The two B vitamins folate (bioactive form of folic acid) and B12 work very closely together in the body and play an essential role in nerve metabolism. B12, for example, is involved in the formation of the myelin sheath (protective sheath of the nerve cell).

*Functional  
nerve cell*

The aim of all 3 vital substances is rapid absorption and direct usability in the body's own repair mechanism of our nervous system.
